## Services

### Growth hacking

Growth hacking is a process of rapid experimentation across marketing channels and product development to identify the most effective, efficient ways to grow a business. Growth hacking[1] refers to a set of both conventional and unconventional marketing experiments that lead to growth of a business. Growth hackers are marketers, engineers and product managers that specifically focus on building and engaging the user base of a business

### Search engine optimization

Search engine optimization (SEO) is a process that helps to increase your website's visibility in the search engines through the use of keyword placements, back linking, relevant content, and other technological means. SEO is an important aspect of attracting visitors to your website. If you have an appealing website on search engines that keep your customers coming back, those customers are likely to refer other people to your website.

### Domain Services

Domain services are Windows Communication Foundation (WCF) services that encapsulate the business logic of a WCF RIA Services application. A domain service exposes a set of related operations in the form of a service layer. When you define a domain service, you specify the data operations that are permitted through the domain service.

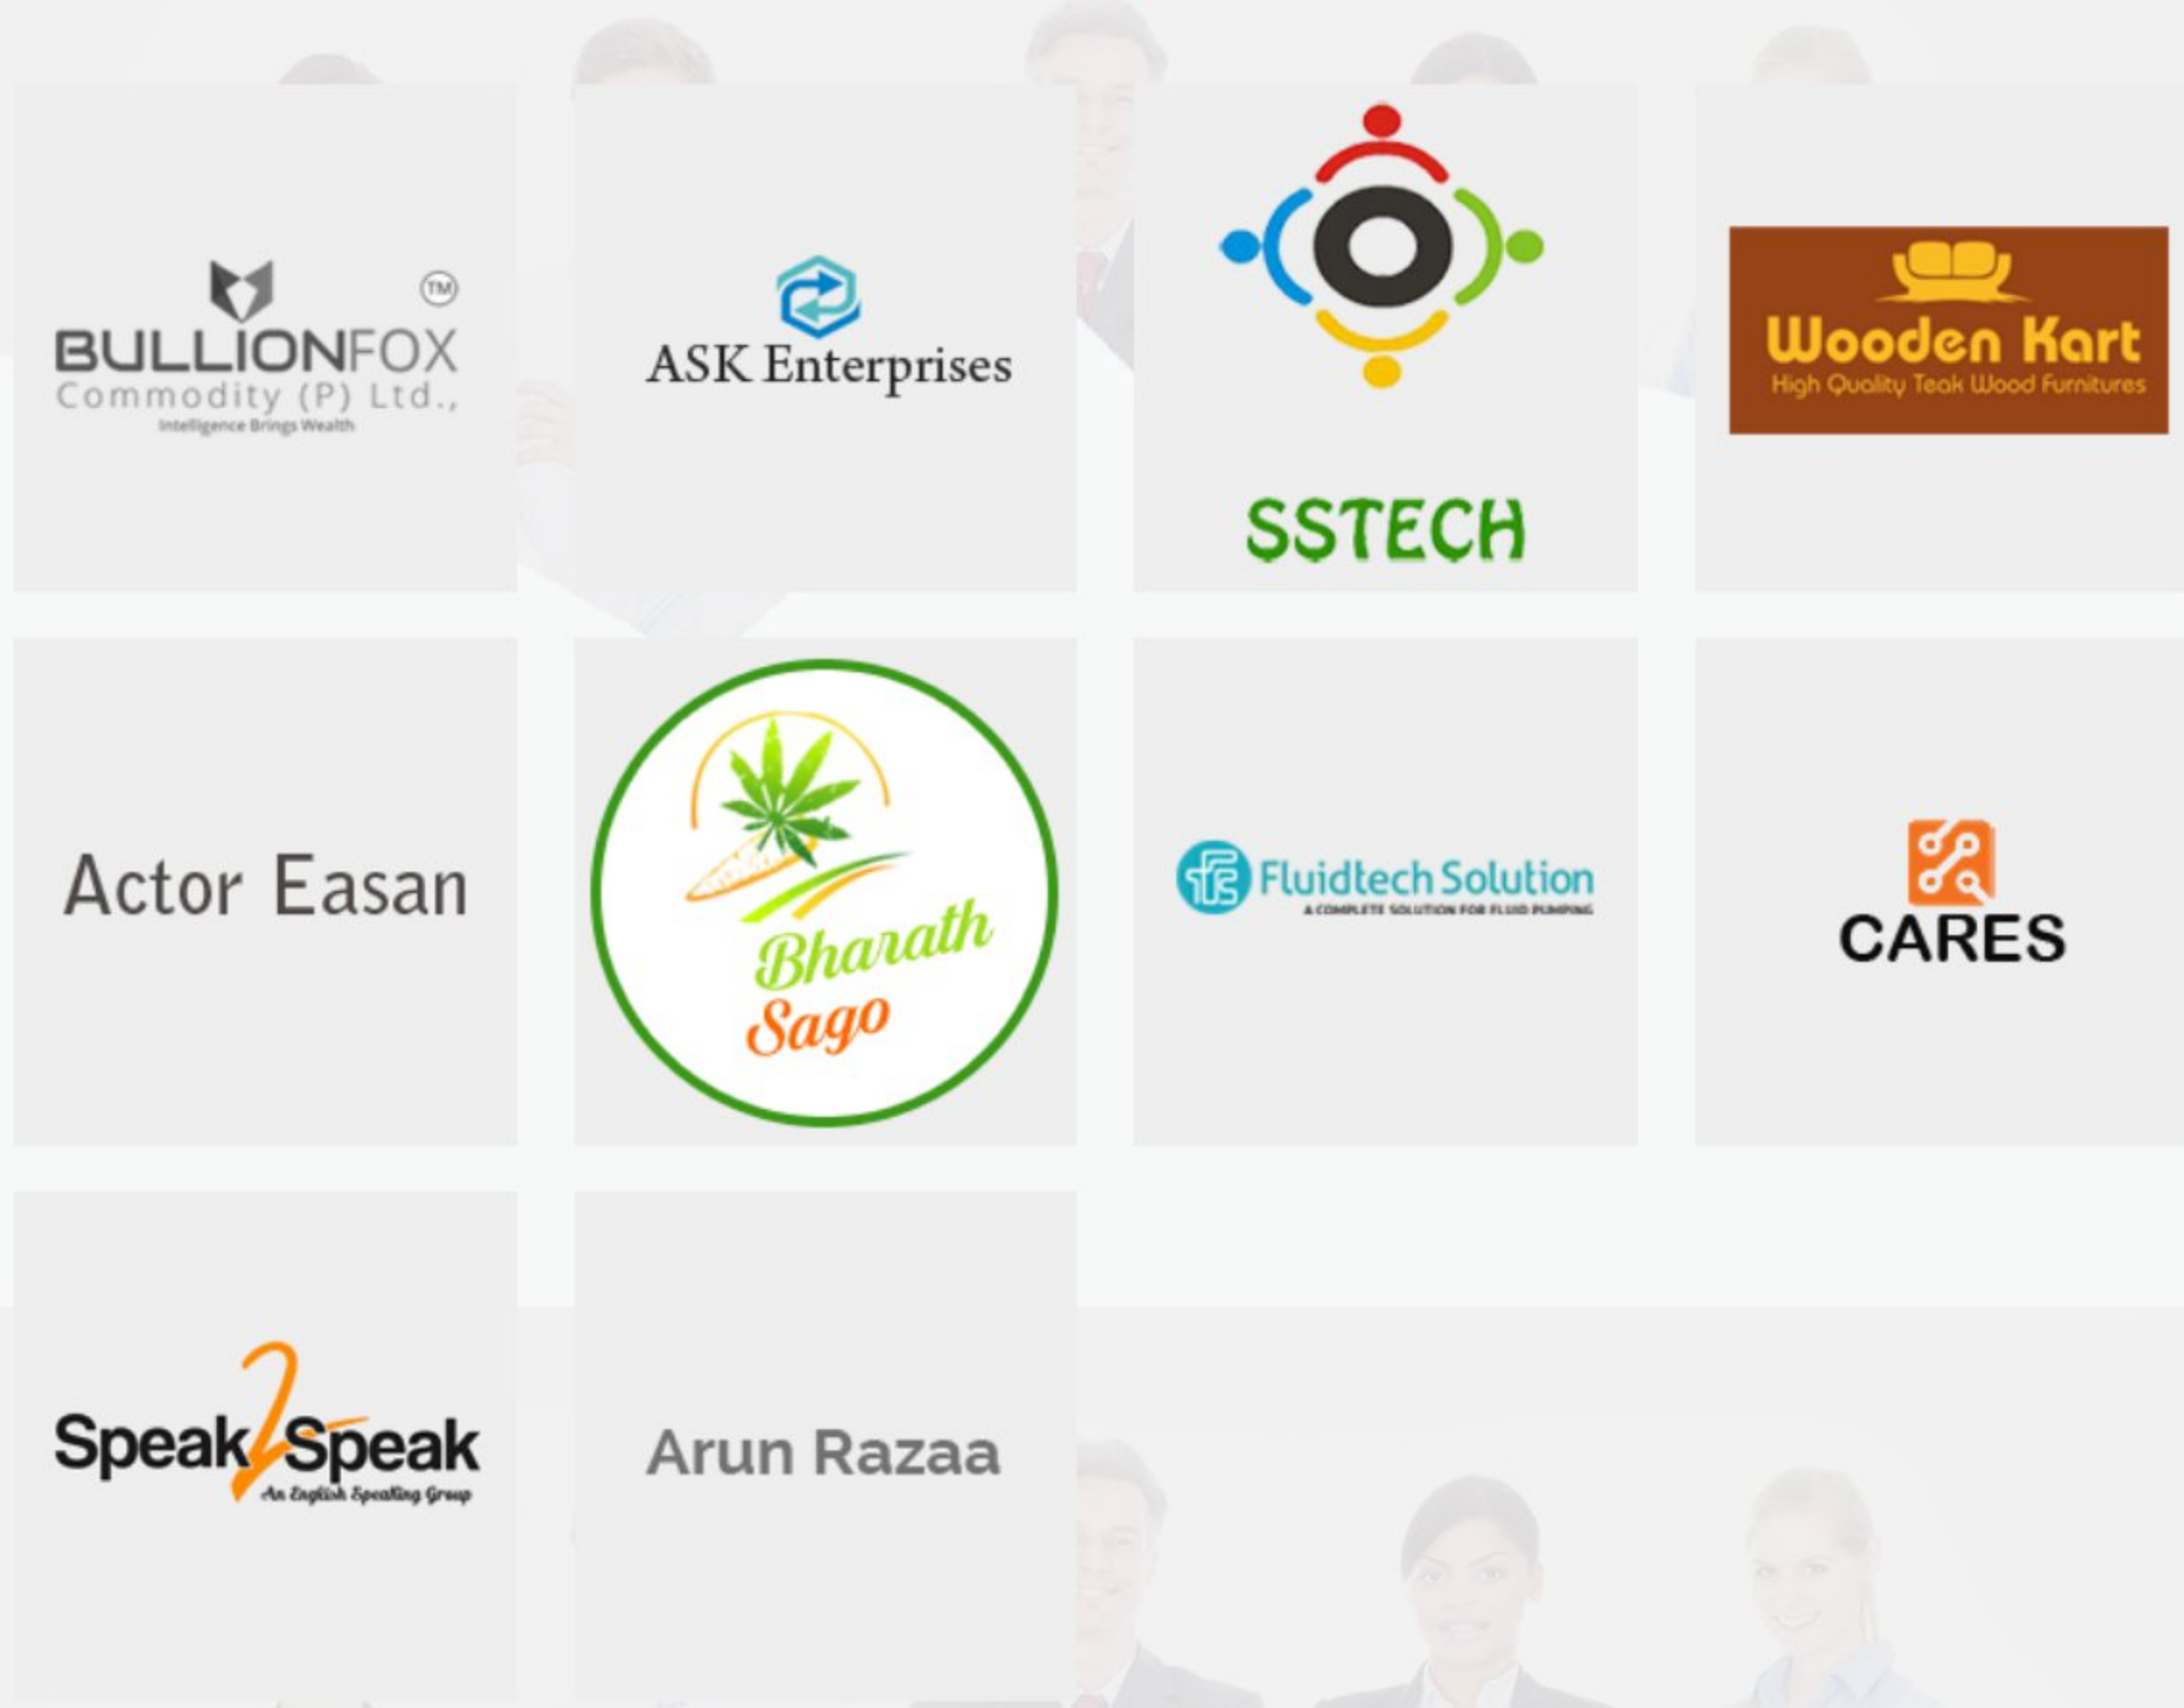

### Cloud Server

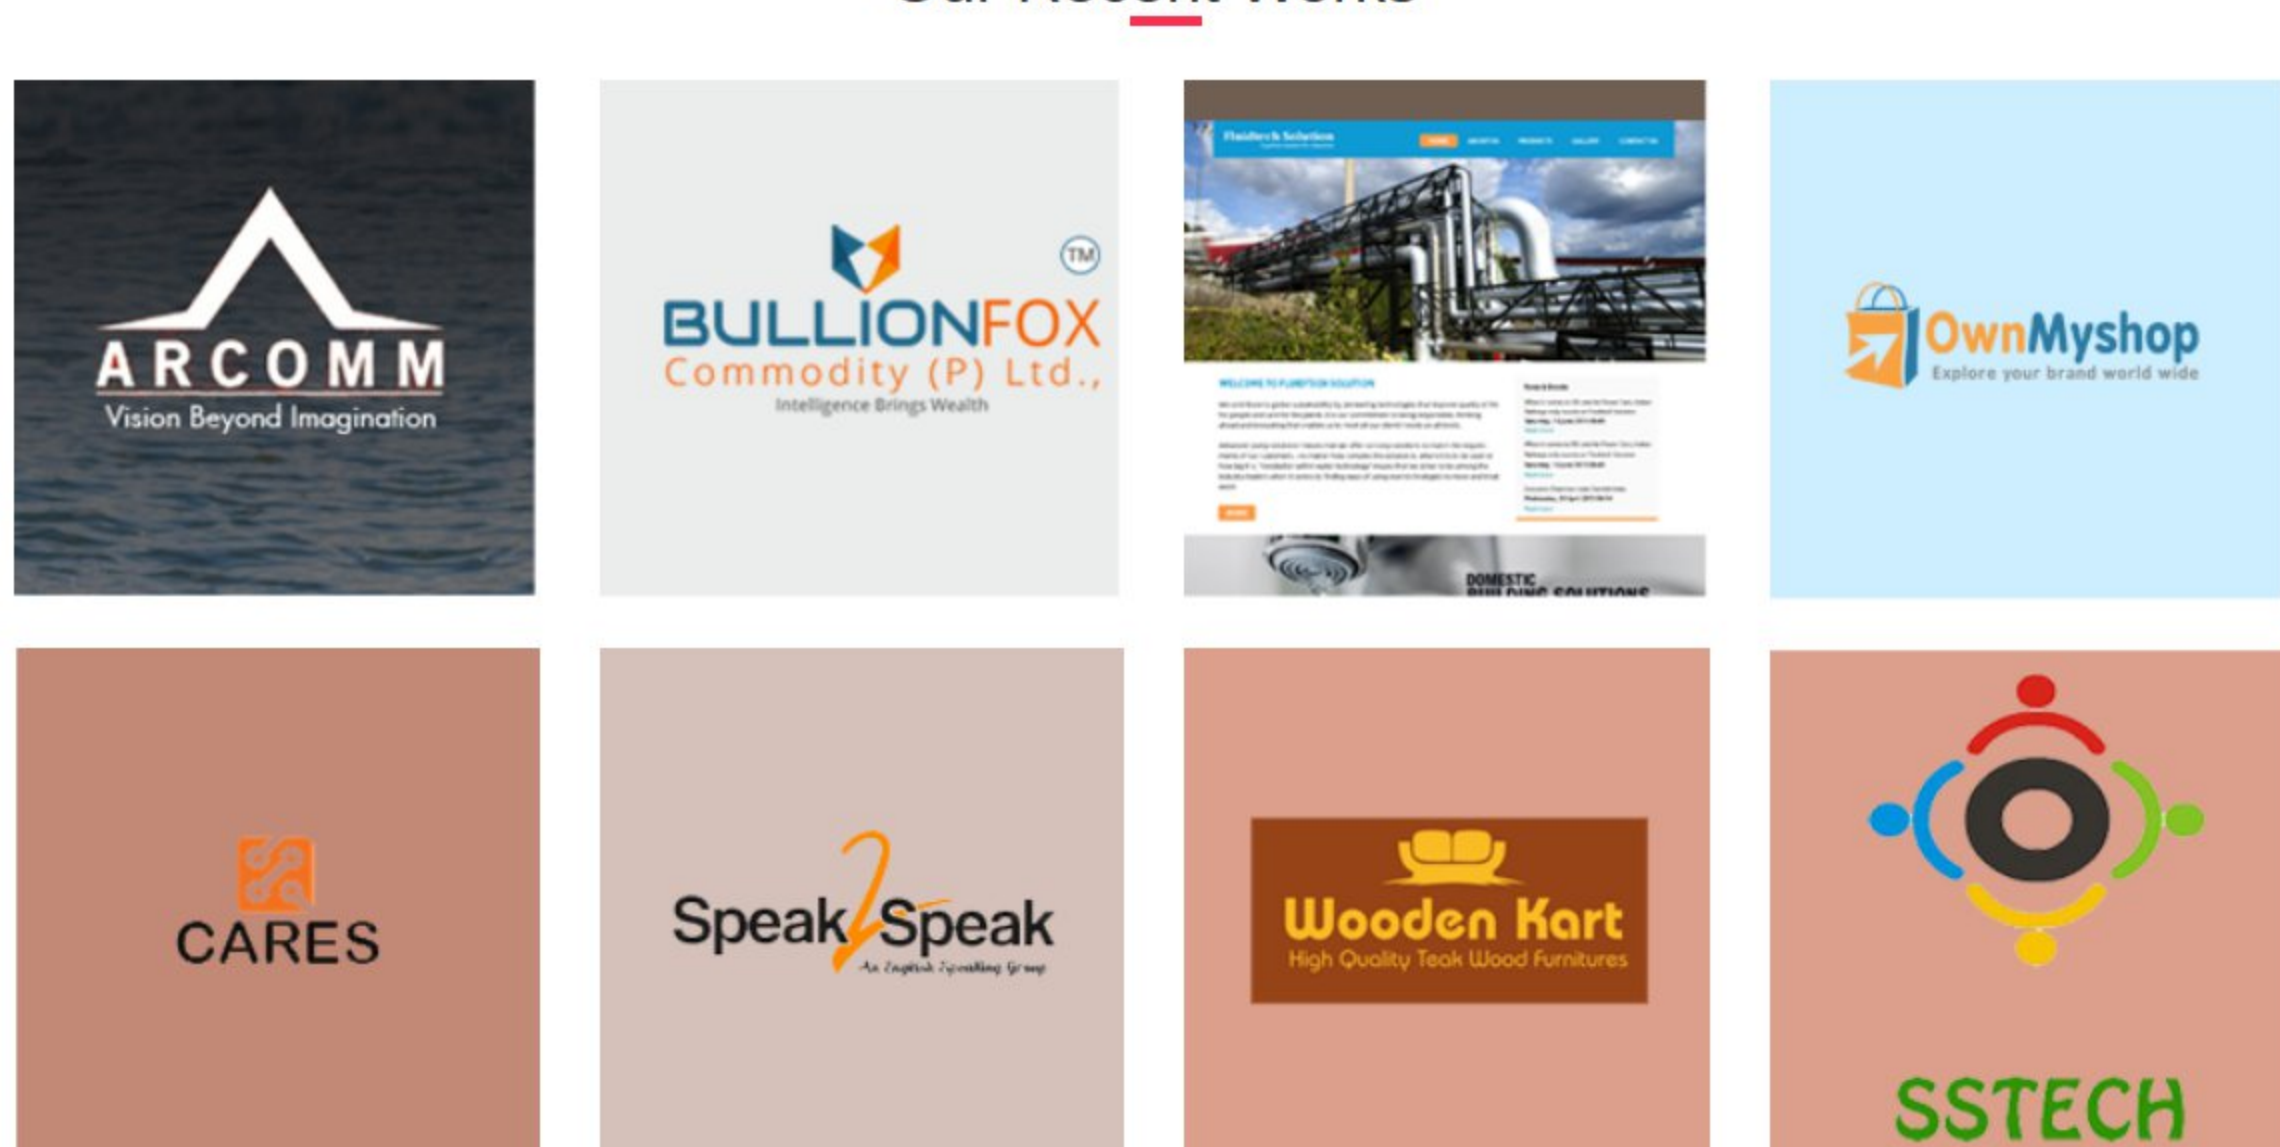

Cloud Computing Services provide information technology (IT) as a service over the Internet or dedicated network, with delivery on demand, and payment based on usage. Cloud computing services range from full applications and development platforms, to servers, storage, and virtual desktops.
